Please see if you can locate the file for work done on the Old Bremerton Gasworks site. The property is in the vicinity of Penn Plaza, it is adjacent to Natacha Sesko's property, and also adjacent (on?) Paul McConkey's property. The work was done about 5-7 years ago and I believe managed by Dan Miller, or maybe Phil Williams. The environmental work was done by GeoEngineers.

Bremerton obtained the grant to do the work on private property. I believe the spoils were generated under a contract the City executed – I'll see if I can find the file to confirm this.

Chal,
It was done under an EPA Brownfields Assessment grant awarded to City.

Tom, why were we paying for this, as it is a federal site? Chal

Me I guess. The work was done by Dan Miller who was let go a few years ago. Lynn Price (who retired a few years ago...) inherited it, and contracted with Parametrix (Dave) to close out the grant. Apparently the barrels didn't get removed then. How about expanding the contract with PMX for Anderson Cove to take care of this as well? Dave indicated he recently paid \$550 to remove a single barrel from Chevron, so we're probably talking about a cost on the order of \$20K - \$25K including consultant assistance and barrel replacement since several have broken or are about to.

Subject: Bremerton Gasworks Drilling Waste Barrels

Hi Mayor Lent and Mr. Martin-

A while back when I met with you, I mentioned the existence of barrels of drilling wastes that were generated by the City's contractor (GeoEngineers, I believe) during the Brownfields sampling work and inquired about having them removed. I'm not quite sure exactly how we left it, but I thought the City was going to look at the contract to see if GeoEngineers was obligated to remove the barrels. If that was done, I was wondering what that review found.

Cascade Natural Gas has their contractors working at the site and they've counted 31 barrels, 7 of which have broken open or are about to break open. Cascade has indicated that they are willing to dispose of the barrels, but are not willing to fill out the necessary hazardous waste manifests since they did not generate the waste materials.

If, for whatever reason, the City or GeoEngineers are not able to dispose of the barrels, we could have Cascade do so if the manifests are filled out. Logically, it would make sense to have GeoEngineers do this, since they generated the materials.

We would like to have these barrels removed from the site as soon as possible and would appreciate anything the City can do to help make that happen.

Please let me know what you think can be done by the City.
Thanks.
